

ENVY THREADS

ENVY THREADS

Our threads have long-lasting effects that can last up to 2 years. They have a high tensile (thread strength), so there is less breakage and improved effects.

Envy Threads is a local company based in Arizona and offers a catered VIP experience from sales to service, training and post-sale support such as a WhatsApp group chat with other Envy Thread practitioners and trainers for questions and support, as well as marketing and social media advice or continuing education opportunities.

Long-Lasting
effect

The effect after
one use can last
up to 2 years

High tensile
strength

Almost no
foreign body
sensation

SMOOTH

Smooth threads are used for overall wrinkle/texture improvement and collagen production to promote smoothing and tightening. They are the most frequently used threads, since they can be applied to all areas of the face and body and used in large quantities.
(Sharp needle)

Gauge (G)	Needle Length (mm)	Thread Length (mm)	Quantity per Pack
27 G	38 mm	54 mm	20
27 G	50 mm	64 mm	20
29 G	38 mm	54 mm	20
30 G	25 mm	28 mm	20

TWISTED SPRING

Twisted spring threads are long threads that are twisted together to maximize collagen production and volume to the skin. Collagen is created in the space between the twisted thread, so it is great for volumization in facial folds, elasticity, and wrinkle/texture improvement.
(Sharp needle)

Gauge (G)	Needle Length (mm)	Thread Length (mm)	Quantity per Pack
27 G	38 mm	81 mm	20
27 G	60 mm	126 mm	20
29 G	38 mm	81 mm	20

MULTI x7

Multi x7 threads consist of seven smooth folded threads that create the volume of fourteen threads. They can be used to improve all types of wrinkles on the skin, especially in facial folds and creases like nasolabial folds. They can maximize volume greatly compared to single or double threads.
(Blunt cannula, L)

Gauge (G)	Needle Length (mm)	Thread Length (mm)	Quantity per Pack
23 G	38 mm	54 mm	20

MOLDED BARBED

Molded barbed threads have a higher tensile strength than standard barbed threads. They are created in a solid mold compared to standard threads that cut barbs into the thread, which decreases its tensile strength. These threads are thick and strong and can be highly effective in lifting.
(Blunt cannula, W)

Gauge (G)	Needle Length (mm)	Thread Length (mm)	Quantity per Pack
19 G	100 mm	155 mm	20
18 G	100 mm	155 mm	20

SMOOTH EYE/LIP

Smooth eye/lip threads are smooth and made for very delicate areas. They include a fully rounded blunt tip cannula to reduce the risk of bleeding and bruising. They are most often used around the upper and lower eyes and lip border.
(Blunt cannula, B)

Gauge (G)	Needle Length (mm)	Thread Length (mm)	Quantity per Pack
30 G	25 mm	28 mm	20
30 G	38 mm	54 mm	20

360° BARBED

360° barbed threads have small barbs located on an axis of 360°. These threads offer two different blunt cannulas: Our L-type cannula is most widely used.

Our W-type cannula comes with the thread already preloaded for ease of use by the practitioner. In addition, this type allows for cannula repositioning before advancing the thread into the tissue, providing less risk of buckling.

(Blunt cannula, L and W)

Gauge (G)	Needle Length (mm)	Thread Length (mm)	Type	Quantity per Pack
18 G	100 mm	155 mm	W	20
19 G	100 mm	155 mm	W	20
19 G	100 mm	155 mm	L	20
21 G	60 mm	115 mm	L	20
21 G	90 mm	145 mm	L	20

HALF BARBED

Half barbed threads have two-sided barbs and high tensile strength. It is a high demand thread because of its lifting abilities and short versatile length.

These threads can be great for lifting areas like the eyebrows, fox eye, nose and jowls.

(Blunt cannula, L)

Gauge (G)	Needle Length (mm)	Thread Length (mm)	Quantity per Pack
19 G	38 mm	50 mm	20
19 G	50 mm	60 mm	20
